(54) Title: A SYRINGE FOR POWDER MEDICAMENT PREMIXING

(54) 发明名称: 一种粉针剂预混注射器

(57) Abstract: The present invention is directed to an assembled syringe for administer powder medicament in the field of medicine. According to the present invention, by using a connecting tube (14), a solvent bottle (8) contained with diluent is communicated with a solute bottle (10) contained with powder by the external force, and the diluent is injected into the solute bottle (10) through the connecting tube (14) under the effect of the pressure, after the powder is dissolved and mixed uniformly, the mixed solution is injected directly into a patient or added to a transfusion bottle or a transfusion tube. Both the solvent bottle (8) and the solute bottle (10) are packaged into a sleeve (5) to avoid being contaminated or cross-infection. Buckles (3) on the plunger sleeve (2) are fitted into restricting slots (4) on the sleeve (5), the fitting of the restricting slots (4) and buckles (3) allows the syringe to have the function of restricting the position, self-locking, controlling the magnitude of the force by which the solute bottle (10) is communicated with the solvent bottle (8), and being convenient for controlling the depth of the needle into the body, and to prevent misoperation or damage during transports, fetching and using. The present invention is a novel design with industrial applicability and inventive step and is adapted to be applied and generalized widely in the industries.

WO 2005/049166 A1

(57) 摘要

本发明是关于医疗领域的一种粉针剂组合加药注射器。本发明是利用连通管(14)将装有稀释液的溶媒瓶(8)和装有药粉的溶质瓶(10)在外力作用下连通,使稀释液在压力的作用下通过连通管(14)射入溶质瓶(10)内,将药粉溶化、均匀混合后直接对患者注射或加入输液瓶或输液管。溶媒瓶(8)和溶质瓶(10)均封装在套体(5)内使其无污染和无交叉感染。设在柄套(2)上的卡钮(3)嵌入设在套体(5)上的限位槽(4)中,利用限位槽(4)和卡钮(3)的相互配合,既能限位又具有自锁功能,既控制溶质瓶(10)和溶媒瓶(8)导通时的作用力大小和便于掌握进针深度,还可以防止误操作或运输、拿取、使用过程中的损坏,成为一种相当具有实用性及进步性的新设计,适于产业界广泛推广应用。
